

**Your dog's kisses may  
contain more than just love**

## **DNA Test for Canine Oral Health**

A simple oral swab is all it takes to find out if your dog is at risk from harmful oral bacteria that can cause bad breath, painful inflammation and gum disease, or lead to life-threatening illness.

Ask us today about K9 Smiles to help keep your dog happy and healthy. The test is covered by most pet insurance plans when part of your vet's plan of care.
